

Will Digital Dentistry Help My Practice?

An introduction and open discussion around digital technologies including impressions, restorations and cementation

Digital Dentistry is here and it's exciting. But making it work for your practice can be challenging. With more than six CAD/CAM systems now on the market, endless options around sending scans to labs, in-office mills, and even implant and aligner manufactures, decision making can be daunting and confusing.

Course objectives: Dr. Seth Wallerstein will give an introduction to digital dentistry. He will describe the benefits and limitations of intraoral digital impressions and chairside milling systems. He will discuss materials used in digitally produced restorations such as Zirconia, Emax, and Obsidian, whether working with a dental lab or milling in-office, as well as techniques for cementation and retrieval.

Seth Wallerstein, DMD, FAGD graduated from Haverford College and received his dental degree from University of Pennsylvania. He continued his dental training as a resident at JFK Hospital where he is currently on staff and is the past Residency Director and past Department Chairman. Dr. Wallerstein is an active member of the ADA, the AAGD from which he has received his Fellowship Degree, and numerous dental study clubs. He was a 2010 inductee into The John P Stevens Hall of Honor, as a distinguished graduate in recognition of his volunteerism and varied activities. Dr. Wallerstein has been practicing dentistry in Edison, NJ for over 25 years, has been scanning intraorally for over six years, and has been milling in his office for the past year. He is extremely qualified to help doctors evaluate and understand today's digital dentistry options.

Location: Dr. Seth Wallerstein's Office, 2678 Woodbridge Avenue, Edison, NJ 08837
